

STICKER APPLICATION GUIDE

1. REMOVE ALL PLASTICS FROM THE BIKE

This makes it a lot easier to place the stickers!

2. CLEAN THE PLASTICS

Remove all dirt, old stickers and grime. When done degrease the plastics.

3. SPRAY THE PLASTICS

Fill a plant sprayer with water and a little dishwashing soap and soak the plastics thoroughly with the sprayer.

4. PLACE STICKERS

Place the stickers on the wet plastics, slide into the right position.

5. SLIDE AWAY MOISTURE

Gently push out the moisture underneath the stickers with a plastic card. Work from the center outward.

6. BLOW DRY STICKERS

Go over the stickers with a blow dryer and gently warm for about 10 minutes, do not heat the same spot too long! Make sure the whole sticker contacts the plastic.

7. DRY FOR 48 HOURS

Sit back, relax and let the plastics rest and dry for 48 hours at room temperature. When all the moisture is away your sticker is rock solid on the plastic. Use the time to order some tuning parts at schakelparts.nl

8. REPLACE PLASTICS ON THE BIKE

Not much to add about this part...

9. ENJOY THE RIDE AND THE NEW LOOK!

Stay safe! And tell everyone where you got these great stickers!
